

Automating processes and saving 10+ hours per week

North Labs is an end-to-end data consultancy that streamlines data operations as a service using Snowflake and Keboola. They are serving highly-regulated industries with their most mission-critical digital implementations while safeguarding their data and ensuring compliance.

Read the full case study here

CHALLENGE

Connecting a specific source system to the ETL pipeline, without raising data engineering costs.

SOLUTION

Keboola's Generic Extractor, that speeds up data extraction from any API-like source.

OUTCOME

Keboola is now central to their Data Concierge offering, centralizing and unifying all their DataOps.

Results:

10+ hours per week saved

By automating weekly reporting.

Ingesting data in hours instead of weeks

By untangling the existing DataOps into a more observable, scalable, and maintainable set of ETL pipelines.

"Well, we looked into other tools available on the market. But really, Keboola is the best solution. This is why it is a core foundational piece of the data stack that we prescribe to our clients."

Daniel Rothame
Cloud Data Delivery Engineer, North Labs

Use cases:

Single source of truth for all reporting

Ingesting data from the ERP systems into Snowflake, building transformations and feeding cleaned data into the data visualization software.

Sales and marketing automation

Building a data foundation to better understand how marketing and sales are driving company growth.

Optimized DataOps performance

Using telemetry data to deliver consumption reports and determine their own efficiencies.

About Keboola

Keboola enables customers to automate business processes across departments by utilizing no-code orchestrations and data templates with complete data governance, user management, and 24/7 support. The platform handles all data demands and removes granular or disconnected data, freeing your best people from repetitive, data-related tasks.
